### Top ten reasons to use compost

- Improve soil structure, porosity, and density, and create a better plant root environment.
- Increase infiltration and permeability of heavy soils and reducing erosion and runoff.
- Improve water holding capacity and reduce water loss and leaching in sandy soils.
- Supply a variety of macro and micronutrients.
- Help control or suppress certain soil-borne plant pathogens.
- Supply significant quantities of organic matter.
- Improve cation exchange capacity (CEC) of soils and growing media.
- Supply beneficial microorganisms to soils and growing media.
- Improve and stabilize soil pH.
- May bind and degrade specific pollutants.
