

KELOWNA'S DARK FIBRE network

WORKING FOR YOU

KELOWNA BUSINESSES

If you are a business or institution, dark fibre can provide benefits such as unlimited speeds and reduced costs.

- The City's dark fibre offering has no limits on bandwidth, so organizations that need to move large amounts of data can now move infinite amounts of data at whatever speeds they want, for a flat monthly fee to the City of Kelowna.
- If you are a business or institution operating (or considering it) in Kelowna and have the infrastructure and know-how to "light up" dark fibre, please contact us.
- The dark fibre service is raw, which means that the customers themselves must connect the equipment required to 'light up' the fibre.

A number of customers have already signed up to be on the City's dark fibre network. These include Rackforce, Bardel Entertainment, UBCO Innovation Library and QHR.

Bardel was looking for a way to expand but still remain in Canada, and Kelowna was an untapped area poised to grow in our industry. Access to the unlimited speeds provided through the City of Kelowna's dark fibre network really sweetened the deal.

- **DELNA BHESANIA,**
CEO, BARDEL ENTERTAINMENT

We're so pleased to have leading-edge companies join the City's dark fibre network. Kelowna is among a handful of cities in B.C. that offer dark fibre to businesses and institutions. Combined with the Okanagan lifestyle, this affordable telecommunications infrastructure make Kelowna an attractive place to start-up, grow or relocate businesses that need to move large amounts of data.

- **COLIN BASRAN, MAYOR OF KELOWNA**
